

Historical-candidate parameter gradients | SHORT PREFLIGHT

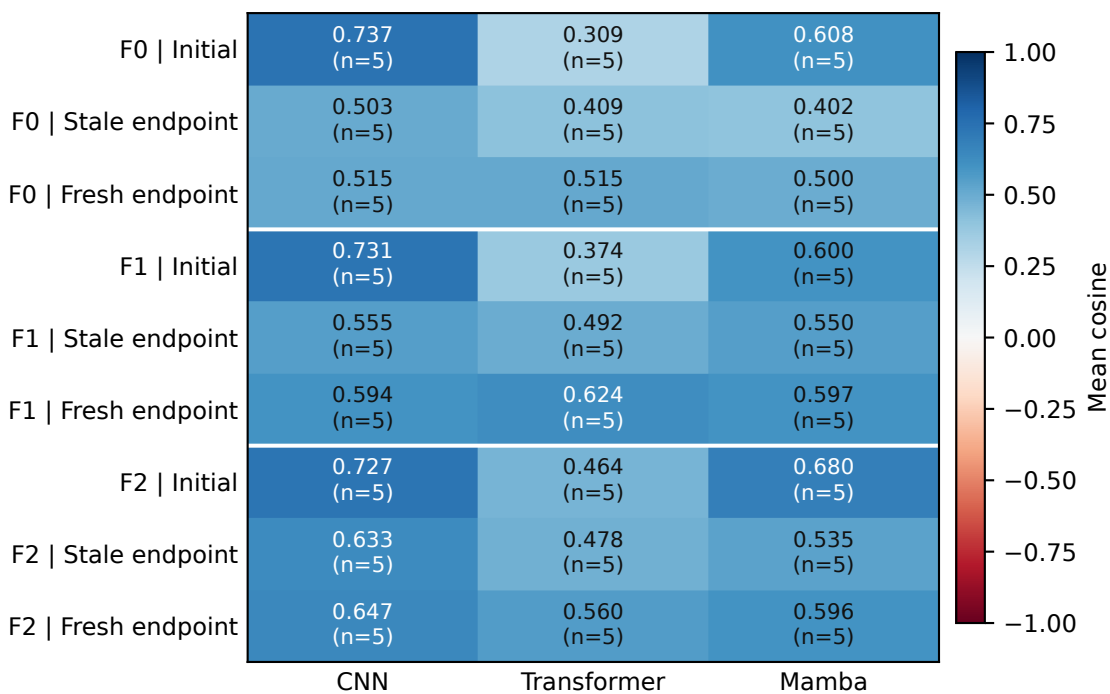

(a) Historical/current norm: $\|g_V\|/\|g_U\|$

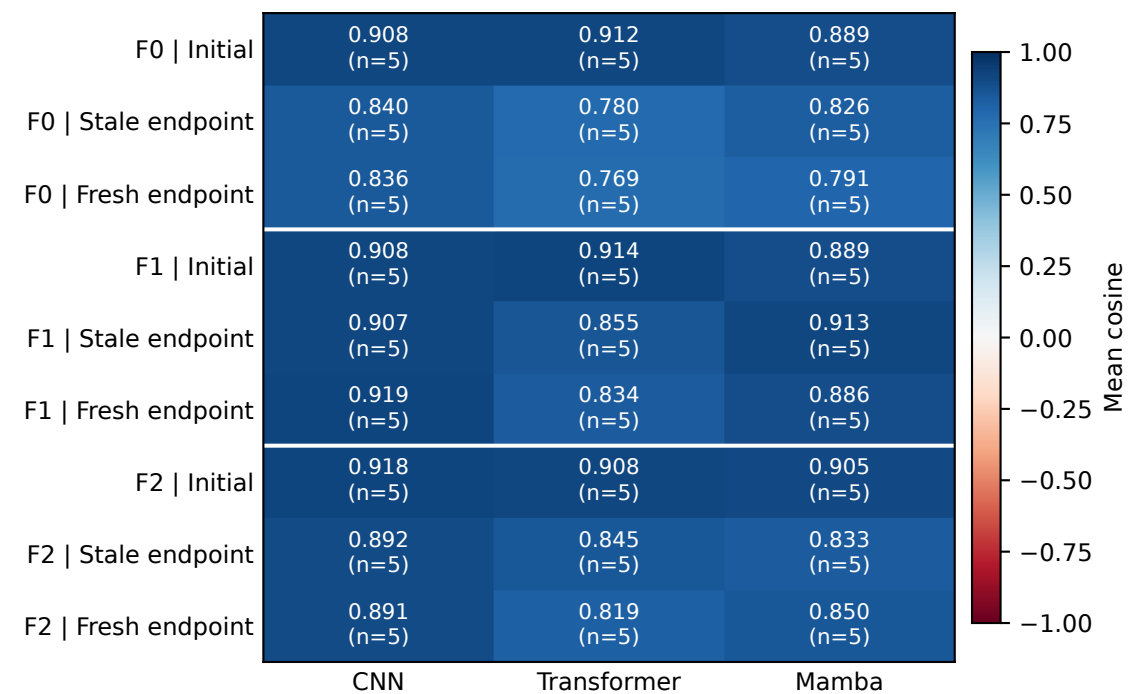

(b) Current vs historical: $\cos(g_U, g_V)$

(c) Current vs both: $\cos(g_U, g_U + g_V)$

(d) Task total: $\cos(G, G + \lambda g_V)$

Fixed weights; same-role parameter blocks; n = defined history batches. No optimizer updates.
